

How stock works, end to end

From ordering and receiving to counting, cost and loss reports: who does each step, what the system checks, and where the numbers come from.

Order Receive Sell Transfer Count Adjust Cost & report

THE ONE RULE

Nobody types a stock quantity. It is always calculated.

On hand = opening balance

– units sold (read from the receipts, never stored twice)

± every recorded movement (void, return, stock in, adjustment, count, transfer)

Every movement records

Who did it, when, the quantity (+ in, – out), the reason and a reference such as the invoice or receipt.

Movements are append-only

Nothing is edited or deleted. A mistake is fixed with a new movement, so history always explains the number.

Per branch

Each branch has its own stock. Products, prices and suppliers are shared across the shop.

WHO DOES WHAT

Three roles, three views of the same stock

Cashier

Sells

- Each sale lowers stock automatically
- Sees only ជិតអស់ / អស់ badges, never numbers
- Asks for voids and returns

Manager

Moves the goods

- Orders, receives, transfers
- Counts and adjusts, with a PIN
- Approves voids and returns
- Never sees cost prices

Owner

Owens the money side

- Confirms the cost of each delivery
- Stock value, losses, profit
- Sets limits and the count schedule
- Sees the full audit trail

THE CYCLE

The stock workflow at a glance

Steps 1 to 4 repeat every week; the bottom row happens as needed

STEP 1 · ORDER

The reorder list suggests how much to buy

- 1 A product goes low**
On hand at or below its minimum. It appears in ត្រូវបញ្ជាទិញ, the nav badge and the dashboard, unless it is already on an open order.
- 2 The system suggests a quantity**
Shown as ទិញ 121 · លក់ ~13/ថ្ងៃ · គ្រប់ 9 ថ្ងៃ, so the manager sees why.
- 3 Create the order**
Pick the supplier: its low items are filled in. Copy the Khmer message to Telegram or SMS.

Suggested = daily sales (last 14 days)
× (supplier lead days + 7)
+ minimum stock
– on hand – already on order

A product with no sales yet falls back to its reorder quantity. Late orders get a badge and a notification.

Two ways in, both checked before stock goes up

Against an order

Receive on the order page

- Part deliveries allowed; the rest stays on order
- Extra units allowed, shown as លើសការបញ្ជាទិញ 3
- Closing an order early needs a reason

Manual stock-in

Supplier, invoice, lines

- If the goods are on an open order, it asks to receive against that order
- Optional expiry date per line (ថ្ងៃ/ខែ/ឆ្នាំ)
- No cost field: the owner adds cost later

Blocked: the same delivery twice

The same supplier + invoice number cannot be received again, on either path. The warning says when and by whom it was received.

Blocked: bad expiry dates

An impossible date or a date already past is refused, with the line highlighted.

Sales, voids and returns move stock on their own

EVENT	STOCK EFFECT	RULE
Sale	– quantity sold	Read from the receipt. Selling below zero is allowed by default but logged as an exception.
Void (approved)	+ everything not already returned	Manager approves with a PIN and a reason.
Return (approved)	+ returned quantity	Manager picks ចូលស្តុកវិញ (back to stock) or ខូច (damaged).
Damaged return	+ return, then – damaged	Counts as a loss against the cashier who made the sale.

Cashier screens show only status badges. Quantities, costs and reasons never reach the till or the customer display.

BETWEEN BRANCHES

Transfers: out at once, in only what was counted

STEP 4 · COUNT

A blind count that cannot be gamed

Every change outside a sale has a reason

REASON	DIRECTION	COUNTS AS LOSS
ខូចខាត damaged	-	Yes
ផុតកំណត់ expired	-	Yes
បាត់ lost	-	Yes
រកឃើញវិញ found	+	Offsets loss
ប្រើក្នុងហាង internal	-	No

Over the limit (10 units or \$50 retail, owner setting) still saves, but appears in Exceptions.

Expiry

ជិតផុតកំណត់ **card**

Goods expiring within 7 days appear on the stock page, the dashboard and in notifications.

Oldest stock is assumed to sell first, so old deliveries already sold out do not raise alerts.

Once expired, កាត់ចេញពីស្តុក opens the adjustment form already filled in.

Cost is a weighted average, confirmed per invoice

- 1

Manager receives goods
No cost entered. The delivery waits in the owner's queue
(បញ្ជាក់ថ្លៃដើមស្តុកចូល).
- 2

Owner enters the invoice price
Starts at the last price paid. A price 30%+ away from the average is flagged, catching typos.
- 3

The average updates
The new average is previewed before confirming.

New average = (on hand × old average
+ received × invoice price) ÷ total

(192 × \$0.30 + 100 × \$0.50) ÷ 292 = **\$0.3685**

Profit never rewrites the past

Each sale uses the average cost at the moment of the sale. A new invoice or a manual correction applies from then on.

What the owner reads, and what it warns about

Stock value

On hand × average cost

By product and category. Warns about stock below zero (needs a count) and products with no cost.

Shrinkage

Net loss

Damaged, expired, lost, count shortages and transfer shortages, minus found and count surpluses. By reason, staff and product.

Profit

Cost at time of sale

Dashboard, profit report and products page all use the same `costAt`.

Exceptions & audit

Nothing hidden

Selling below zero, large adjustments, count differences and overdue counts. The audit log keeps every movement.

SIGNALS

Where each alert comes from, and what it asks for

ALERT	SHOWN ON	NEXT ACTION
Low, not yet ordered	Nav badge, dashboard, notification	Open ត្រូវបញ្ជាទិញ, create order
Order late	Badge, notification	Call the supplier or close with a reason
Transfer waiting	Badge on ផ្ទៃស្តុក	Count in at the receiving branch
Expiring or expired	Stock page card, dashboard, notification	Sell first, or write off once expired
Count due or overdue	Dashboard, count page; Exceptions after 2 days	Start a full count
Deliveries without cost	Owner nav badge and dashboard	Confirm the invoice price

THE RULES TO KEEP

Six guarantees the stock system makes

- 1 Calculated, never typed**
Every number traces back to movements.
- 2 Nothing counted twice**
No double invoices, no double sales during counts.
- 3 Blind means blind**
Counts and recounts never show the system figure.
- 4 Costs stay with the owner**
Cashiers and managers never see them.
- 5 The past stays put**
Profit uses the cost at the time of each sale.
- 6 Every loss has a name**
Reason, person and time on every movement.
